What is CDNs: Everything You Need To Know about a Content Delivery Network  
(90%) Votes

Are you new to the term CDNs and totally oblivious about what it means? Well, you seem to be in dire need of some answers. 😎

I'll try to explain to you, as simple as its possible, what exactly a Content Delivery Network abbreviated as CDN is.

## CDNs brings the right traffic

CDN is all about disseminating the traffic of your website to different regions through cloud based servers instead of using standard hosting. This way, the servers that are close to the end user will be triggered and the data will reach the end user faster, the process saves time and as we all know, time is money.

## Needless to say, CDNs saves your cost as well as takes care of the data

---

The whole concept of CDNs was primarily introduced to make the data available across the regions via various surrogate web servers so that the data is available to end users without any delay of time. The prime advantage of using CDNs is helping the latency lower. Apart from that, it also helps save the cost by reducing the bandwidth. Check [hostiserver.com](http://hostiserver.com) if you are interested to know more about it.

## CDNs is more helpful than you think it is

---

Now, if you are an [e-commerce](#) owner or an online vendor you can [benefit from CDNs](#) a great deal. CDNs offer solution for business owner just like yourself which are cost-effective and still serve your customers in the best possible way, without any limit to how much data is being downloaded from the page. So you're looking at a better security against cyber attacks and a much better speed and service.

## CDNs can enhance your overall website experience

---

There is a host of problems that are being catered to by CDNs, because it alters your internal structure and even saves you from paying to half of the IT staff you currently have. Not to mention, CDNs soars each year by 20% but anyway, these are the ways in which your experience can be enhanced if you use CDNs.

## CDNs is everything you need and more!

---

CDNs help you set a criterion so that you can make it possible for your website to give its best possible performance. There are few to no downtimes. It gives your business better scalability to you can grow it faster without any troubles. It becomes easier to manage the traffic peaks. You can branch out to other regions across the globe pretty easily. It helps you reach your [mobile](#) customers easily. You will notice that you can make your website more interactive without having to suffer from latency problems.
